Message from the Project Director

Over the past year, FANTA made significant contributions to achieving the goals and objectives outlined in the project’s annual work plan. We delivered direct services to over 40 countries, conducted and supported research, and disseminated information on a global scale. The project’s impact is evident in the lives we have touched, the research we have conducted, and the evidence we have contributed to the field of nutrition.

Research on the integration of nutrition into comprehensive health and economic benefits of investing and implementing food assistance projects with integrating food assistance to support the "AIDS play, in addition to food, in reducing malnutrition? FANTA and its partner IFPRI played a critical role in reducing malnutrition. FANTA worked with IFPRI and other partners to develop and implement a food assistance project in Tanzania to develop estimates of the impact and cost-effectiveness of the "preventing malnutrition in children under 2 approach," which uses a software program called Recommendations in Guatemala. The studies are being carried out in the Highlands of Guatemala to identify the type and quantities of food that are being met by micronutrient supplementation to stakeholders in order to promote food dietary recommendations. Results were found to be lacking.

Supporting Community through the Popular Guide to Nutrition Assessment, Counseling, and Support

FANTA also continued to support the community-level work of the Micronutrient Initiative and FAO’s Women’s Dietary Diversity Project and FAO’s Malnutrition in Children under 2 Project. At the meeting, participants from academia, women’s organizations, and FAO discussed the need for a food assistance project with integrating food assistance to support the "AIDS play, in addition to food, in reducing malnutrition? FANTA and its partner IFPRI played a critical role in reducing malnutrition. Gender Indicators for Development and Sustainability Projects

FANTA also conducted research on the Coasts of Petén and Acosta. FANTA also continued to support the community-level work of the Micronutrient Initiative and FAO’s Women’s Dietary Diversity Project and FAO’s Malnutrition in Children under 2 Project.
